Anthony Kuang

(510) 599-2988 • anthonykuang@berkeley.edu • zhuojiek.github.io

Education

University of California, Berkeley **Graduation:** Dec 2027
B.A. in Computer Science **Major GPA:** 3.83

Coursework: Natural Language Processing† · Computer Vision† · Reinforcement Learning† · LLM Seminar† · Stochastic Processes† · Machine Learning · Robotics · Linear Control · Optimization · Discrete Math‡ · Data Structures † Graduate level ‡ Course staff

Experience

Robotics Center of Silicon Valley *Robotics Intern, San Francisco* Sep 2026 - Present

- Work with RCSV RL^2 Eval clients to deploy VLA and World Model policies on robotic arms (xArm, YAM, FR3), supervise rollouts, write readiness reports, and collect various teleoperation data on research hardware.

Berkeley Artificial Intelligence Research, Darrell Group *Research Assistant* Apr 2026 – Present

- Investigating whether mid-training a unified multimodal model (BAGEL) on paired graphics code and rendered images improves reasoning capabilities across modalities, targeting second-author conference submission.

Deft Robotics *Robotics Intern, San Francisco* May - Aug 2026

- Trained Action Chunking Transformer (ACT) models for bimanual manipulation on ∼150 teleoperated demonstrations for precise automotive parts insertion into millimeter-scale slots for 6 clients across 30+ tasks.
- Developed ROS 2 infrastructure for synchronized camera/proprioception, VLA inference, control, and rollout logging.

Stripe *SWE Intern, San Francisco* May - Aug 2025

- Contributed to internal Node.js package for analyzing taxpayer data from a REST API, migrated client portals across 10+ internal teams to said package; integrated with internal services using TypeScript, Jest, React, Express.js.
- Developed Python heuristics to prioritize test execution in Jenkins CI pipelines for the largest Ruby codebases (30M+ LOC, 2M+ tests). Built visualizations and dashboards to evaluate test-ordering strategies.

Code Ninjas *Code Sensei, Livermore CA* Feb 2025 – Present

- Work 18 hrs/week as a Lua and Python instructor, guiding young students through coding projects and curriculum.

UC Berkeley iCyPhy Lab, Seshia Group *Research Assistant* Aug – Dec 2024

- Created a Llama 2 pipeline to refine FSMs from demonstrations, using C# for Unity visualizations and personalized training scenarios in Meta Quest. Ran tests with Stanford Health patients to reteach motor skills in rehab.

Publications

Probing Layerwise Sensitivity for LLM Security Analysis Ahmed Ismail, Ayo Akinkugbe, Sean O'Brien, Kevin Zhu
Cognitive Behavioral Modeling with Activation Steering

- Developed an interpretability framework that steers LLM internal activations, tracing how cognitive and security biases (e.g., jailbreaks, misinformation) emerge across layers and modifying tipping points where interventions flip behavior.
- PLSLSA accepted to NeurIPS Lock-LLM Workshop, CBMAS accepted to NeurIPS CogInterp Workshop in 2025.

Hybrid Algorithms Consistently Beat Offline RLHF Methods Richik Pal, Eddie Cui

- Implemented LLM RL algorithms (DPO, IPO, AOT, GRPO, DrGRPO, GSPO) on Qwen2.5-1.5B-Instruct and designed a weighted hybrid AOT-DPO objective with reward model reranking, reaching a 0.865 ± 0.015 win rate over base model.

WaveletFlow: Spatially-Localized Frequency Mixing for Flow Matching in PDE Turbulence Shuai Meng

- Improved FourierFlow, a leading generative model for simulating fluid flows by incorporating wavelets in the architecture to better represent high frequency features (shears and vortices), reducing prediction error by 8.4%.

Projects

Viso *RAG, FAISS, Manim, LaTeX, React.js, Node.js, Docker, VPS*

- AI education platform generating visual lectures with 160M token RAG corpus, won most technical project in AdventureX (China's largest hackathon) and placed top 20/150 in amber.ac competition for pre-seed startups in Shenzhen.

AI Entrepreneurs at Berkeley Founding member of student-run AI incubator with $40M portfolio valuation.
